

JARIK CONTOURED FOAM CUSHION

BETTER POSTURE, COMFORT AND DURABILITY

IMPROVED POSTURE AND STABILITY

Body-contoured foam helps hold hips to back of wheelchair, to help prevent “kyphotic” arching of sitter’s back, and provide improved sitting stability.

USER-PREFERRED

In controlled, 4 week cushion trials, all 20 testers strongly preferred the JARIK Contoured Foam Cushion over a standard flat foam cushion. See www.jarikmedical.com for complete study results.

EXTRA-COMFORTABLE

Comfort foam permits all-day sitting.

EXTRA-DURABLE MATERIALS

Designed for years of use. Foam tested to 500,000 compressions (≈ 2+ year’s use) without noticeable wear.

IMPROVED LEG POSITIONING

Center rise (abductor) helps position legs properly.

NON-SKID BOTTOM

Prevents cushion sliding to encourage upright posture.

OPTIONAL FRONT ZIPPER

Allows removing cover for washing or modifying internal foam dimensions.

100% URINE-PROOF COVERINGS

Waterproof outer fabric plus sealed poly bag over foam protect against urine leakage, even through cover seams.

HELPS PREVENT SPINAL CURVATURE (SCOLIOSIS)

Conventional “sling” seats encourage off-center sitting with one hip lower, leading to scoliosis (“S”-shaped spine). A slight curve on cushion bottom helps fill in the curved seat, to reduce this tendency. Can also be used on solid seats.

LIGHTWEIGHT

Weighs only 600 grams (21 ounces) regular adult size.

OPTIONAL SOLID SEAT MODEL

“U”-shaped plywood is glued onto flat foam bottom to help level the hips. A rear cut-out improves comfort at seat bones. A front zipper allows access to cushion to customize dimensions with a serrated knife.

Mission Statement

The goals of **JARIK Medical** are simple:

- 1) To help save the lives of the thousands of people with spinal cord injuries/disorders in developing countries that are dying each year from preventable pressure sores.
- 2) To help all people with disabilities in developing countries to sit straighter, more comfortably and more stably, so that they can function better in their wheelchairs.

To help accomplish this, we will:

- 1) Design, clinically validate, manufacture and distribute high quality wheelchair cushions about 75% less expensive than comparable products in developed countries.
- 2) Sell our cushions to socially-minded enterprises in developing countries that can earn a profit and will hire local people to properly fit and service our products.
- 3) Sell our cushions to charity wheelchair providers and assist them in improving their wheelchair seating outcomes.
- 4) Provide a website with easy-to-follow education materials, to help providers properly fit wheelchair seating (www.jarikmedical.com/en/education.php).

The limited proceeds from the sale of our products are used only to support our low overheads and to develop better future products.
